Only instances where all algorithms have a value for "avg_dur_gao" are considered. Each table entry gives the sum of "avg_dur_gao" for that domain. The last row reports the sum across all domains.

Only instances where all algorithms have a value for "cost" are considered. Each table entry gives the sum of "cost" for that domain. The last row reports the sum across all domains.

Only instances where all algorithms have a value for "expansions" are considered. Each table entry gives the geometric mean of "expansions" for that domain. The last row reports the geometric mean across all domains.

Only instances where all algorithms have a value for "expansions_until_last_jump" are considered. Each table entry gives the sum of "expansions_until_last_jump" for that domain. The last row reports the sum across all domains.

Only instances where all algorithms have a value for "num_gao" are considered. Each table entry gives the sum of "num_gao" for that domain. The last row reports the sum across all domains.

Only instances where all algorithms have a value for "search_time" are considered. Each table entry gives the geometric mean of "search_time" for that domain. The last row reports the geometric mean across all domains.

Only instances where all algorithms have a value for "sg_initialization_time" are considered. Each table entry gives the sum of "sg_initialization_time" for that domain. The last row reports the sum across all domains.

Only instances where all algorithms have a value for "tot_dur_gao" are considered. Each table entry gives the sum of "tot_dur_gao" for that domain. The last row reports the sum across all domains.

Only instances where all algorithms have a value for "total_time" are considered. Each table entry gives the geometric mean of "total_time" for that domain. The last row reports the geometric mean across all domains.
